A DIFFERENT APPROACH TO EQUITY INVESTING

Concentrated portfolio of quality companies – The portfolio usually consists of 25-35 large cap companies that typically have three characteristics:

- Generate free cash flow
- Trade at a discount to their long-term value
- Provide a higher degree of predictability (e.g. recurring contract revenue, high market share)

Options overlay – Options are usually no more than 5% of the portfolio but provide two very powerful benefits:

- Enhanced risk management – insurance to protect against negative market outcomes
- Enhanced risk/return – maximize return per unit of risk

Well-defined risk management process – A well-defined investment process that includes loss limits and sell discipline, provides an added objective measure to ensure that the losers are identified early and sold out of the portfolio, and the winners are sold when they reach their target price.

Tactical cash allocation – John tactically adjusts portfolio's cash position, usually between 0% – 40%, to manage risk.
