Management Discussion of Fund Performance

Investment Objective and Strategies

The investment objective of the Sprott Focused U.S. Dividend Class (the “Fund”) is to provide consistent income and capital appreciation by investing primarily in a diversified portfolio of dividend yielding U.S. equities.

To achieve the Fund’s investment objective, the Portfolio Adviser follows a fundamental, bottom-up approach to investing. The Fund will invest in dividend yielding U.S. equities, foreign securities, and other mutual funds and may also:

- invest in private placements, and indirectly in physical commodities other than gold through investments in commodity ETFs;
- engage in securities lending and repurchase and reverse repurchase transactions as permitted by securities regulations to seek to generate additional income;
- engage in short selling in a manner which is consistent with the investment objective of the Fund; and
- use derivative instruments, such as options, futures, forward contracts and swaps, for both hedging and non-hedging strategies.

Risk

The risks of investing in the Fund are described in the Fund’s simplified prospectus. The Fund is suitable for those investors seeking the consistent income and capital appreciation potential of dividend yielding U.S. equities. The Fund is suitable for investors with a medium tolerance for risk and volatility and a medium to long-term investment horizon.

1 The information is provided as at December 31 of the years shown.

2 Management expense ratio ("MER") is based on total expenses (excluding commissions and other portfolio transaction costs) for the stated period and is expressed as an annualized percentage of daily average net asset value during the period.

3 The Manager may waive or absorb a portion of the operating expenses of the Fund. Waivers and absorption can be terminated at any time.

4 The trading expense ratio ("TER") represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the period. The TER includes dividend expense and securities borrowing expense paid by the Fund in connection with securities sold short.

5 The Fund's portfolio turnover rate indicates how actively the Fund's portfolio adviser trades its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the year. The higher the Fund's portfolio turnover rate in a year, the greater the trading costs payable by the Fund in the year, and the greater the chance of an investor receiving taxable capital gains in the year. There is not necessarily a relationship between a high turnover rate and the performance of the Fund.

Past Performance

The indicated rates of return are the historical total returns including changes in share values and assume reinvestment of all distributions in additional shares of the relevant Series of the Fund. These returns do not take into account sales, redemption, distribution or optional charges or income taxes payable by any shareholder that may reduce returns. Please note that past performance is not indicative of future performance. All rates of return are calculated based on the Net Asset Value of the particular Series of the Fund.

Year-by-Year Returns

The following chart indicates the performance of each Series of the Fund for the period ended December 31 shown, unless otherwise noted. The chart shows, in percentage terms, how much an investment made on the first day of each period would have grown or decreased by the last day of each period.

* Return from the period November 26, 2015 for Series A, A1, and F (not annualized).

Annual Compound Returns

The following table illustrates the annual compound total return for Series A, A1, and F shares of the Fund for the periods shown. As a basis of performance comparison, the annual compound return of the Fund is compared to that of S&P 500 Total Return Index (the "Index"). The Index is an index of 500 stocks actively traded in the United States chosen for market size, liquidity and industry grouping, among other factors. Since the Fund does not necessarily invest in the same securities or in the same proportion as the index, the performance of the Fund is not expected to equal its performance.
